

Weerstand van een staal-beton kolom belast op druk en buiging NEN-EN 1994-1-1 artikel 6.7.3

Geometrie

Kolomlengte l	=	4,00 m
Profieltype	=	HEA
Gekozen profiel	=	HEA 300
Hoogte profiel h	=	290 mm
Breedte profiel b	=	300 mm
Dikte flens t_f	=	14,0 mm
Dikte lijf t_w	=	8,5 mm
Oppervlak staalprfl A_a	=	11300 mm ²
Oppervlak beton $A_c = b * h - A_a$	=	75700 mm ²
$W_{a,pl}$	=	1383*10 ³ mm ³
$W_{c,pl} = \frac{b * h^2}{4} - W_{a,pl}$	=	4925*10 ³ mm ³
I_a	=	18260*10 ⁴ mm ⁴
$I_c = 1/12 * b * h^3 - I_a$	=	42713*10 ⁴ mm ⁴
$I_{z,a}$	=	6310*10 ⁴ mm ⁴
$I_{z,c} = 1/12 * h * b^3 - I_{z,a}$	=	58940*10 ⁴ mm ⁴

Materialen en veiligheidsfactoren

Staal	=	S355
Beton	=	C20/25
f_y	=	355 N/mm ²
f_{ck}	=	20 N/mm ²
E_a	=	210000 N/mm ²
E_{cm}	=	30000 N/mm ²
γ_{M0}	=	1,00
γ_{M1}	=	1,00

$$\begin{aligned}
 \gamma_{M2} &= && 1,25 \\
 \gamma_c &= && 1,50 \\
 f_{cd} &= & f_{ck} / \gamma_c &= & 13 \text{ N/mm}^2 \\
 f_{yd} &= & f_y / \gamma_{M0} &= & 355 \text{ N/mm}^2 \\
 \text{Kruipcoëfficiënt } \varphi_t &= && 3,00
 \end{aligned}$$

Belastingen

$$\begin{aligned}
 \text{Drukkracht in kolom } N_{Ed} &= && 900 \text{ kN} \\
 \text{Blijvende deel van de drukkracht } N_{G,Ed} &= & 0,5 * N_{Ed} &= & 450 \text{ kN} \\
 \text{Moment in kolom } M_{Ed} &= && 180 \text{ kNm}
 \end{aligned}$$

Toetsing

Toetsing op basis van figuur 6.19 van NEN-EN 1994-1-1

$$\begin{aligned}
 N_{pl,Rd} &= & (A_a * f_{yd} + 0,85 * A_c * f_{cd}) * 10^{-3} &= & 4848 \text{ kN} \\
 M_{max,Rd} &= & (W_{a,pl} * f_{yd} + 0,5 * W_{c,pl} * 0,85 * f_{cd}) * 10^{-6} &= & 518 \text{ kNm} \\
 h_n &= & \frac{A_c * 0,85 * f_{cd}}{2 * (b - t_w) * 0,85 * f_{cd} + 4 * t_w * f_{yd}} &= & 45 \text{ mm}
 \end{aligned}$$

$$\begin{aligned}
 \text{Helft lijfhoogte} &= & h/2 - t_f &= & 131 \text{ mm} > h_n \\
 M_{n,Rd} &= & (t_f * h_n^2 * f_{yd} + 1/2 * (b - t_f) * h_n^2 * f_{cd}) * 10^{-6} &= & 14 \text{ kNm} \\
 M_{pl,Rd} &= & M_{max,Rd} - M_{n,Rd} &= & 504 \text{ kNm}
 \end{aligned}$$

Punt A

$$\begin{aligned}
 N_A &= & N_{pl,Rd} &= & 4848 \text{ kN} \\
 M_A &= & &= & 0 \text{ kNm}
 \end{aligned}$$

Punt B

$$\begin{aligned}
 N_B &= & &= & 0 \text{ kN} \\
 M_B &= & M_{pl,Rd} &= & 504 \text{ kNm}
 \end{aligned}$$

Punt C

$$\begin{aligned}
 N_C &= & A_c * f_{cd} * 10^{-3} &= & 984 \text{ kN} \\
 M_C &= & M_{pl,Rd} &= & 504 \text{ kNm}
 \end{aligned}$$

Punt D

$$\begin{aligned}
 N_D &= & 1/2 * A_c * f_{cd} * 10^{-3} &= & 492 \text{ kN} \\
 M_D &= & M_{max,Rd} &= & 518 \text{ kNm}
 \end{aligned}$$

$$\begin{aligned}
 \mu_d &= & &= & 1,00 \\
 \alpha_M &= & &= & 0,90
 \end{aligned}$$

Om de tweede orde effecten mee te nemen wordt de factor k bepaald volgens 6.7.3.4

$$\begin{aligned}
 E_{c,eff} &= & \frac{E_{cm}}{1 + \varphi_t * \frac{N_{G,Ed}}{N_{Ed}}} &= & 12000 \text{ N/mm}^2 \\
 EI_{eff} &= & 0,9 * (E_a * I_a + 0,5 * E_{c,eff} * I_c) &= & 36818 * 10^9 \text{ Nmm}^2 \\
 N_{cr,eff} &= & \frac{\pi^2 * EI_{eff}}{l^2 * 10^9} &= & 22711 \text{ kN}
 \end{aligned}$$

$$\beta = 1,00$$

$$k = \frac{\beta}{1 - N_{Ed} / N_{cr,eff}} = 1,04$$

Kromme = b

Beginexcentriciteit is $e_0 = 20 \text{ mm}$

$$\text{Toetsing buiging} = \frac{M_{Ed} * k + N_{Ed} * e_0 * 10^{-3}}{\mu_d * M_{pl,Rd}} = 0,41 \leq \alpha_M$$

Buiging voldoet, in de controle is rekening gehouden met de aanwezige drukkracht.

Controle staalbijdrage

$$\text{Maximum staalbijdrage } \delta = \frac{A_a * f_{yd}}{N_{pl,Rd} * 10^3} = 0,83 \leq 0,9$$

$$\text{Minumum staalbijdrage } \delta = \delta = 0,83 \geq 0,2$$

Staalbijdrage ligt binnen de onder en bovengrens.

Toetsing normaalkracht zwakke as

$$N_{pl,Rd} = (A_a * f_y / \gamma_{M1} + 0,85 * A_c * f_{cd}) * 10^{-3} = 4848 \text{ kN}$$

$$N_{pl,Rk} = (A_a * f_y + 0,85 * A_c * f_{ck}) * 10^{-3} = 5298 \text{ kN}$$

$$E_{c,eff} = \frac{E_{cm}}{1 + \phi_t * \frac{N_{G,Ed}}{N_{Ed}}} = 12000 \text{ N/mm}^2$$

$$EI_{z,eff} = 0,9 * (E_a * I_{z,a} + 0,5 * E_{c,eff} * I_{z,c}) = 15109 * 10^9 \text{ Nmm}^2$$

$$N_{cr,eff} = \frac{\pi^2 * EI_{z,eff}}{l^2 * 10^9} = 9320 \text{ kN}$$

$$\lambda = \sqrt{\frac{N_{pl,Rk}}{N_{cr,eff}}} = 0,75$$

Kromme = b

$$\alpha = 0,34$$

$$\Phi = 0,5 * (1 + \alpha * (\lambda - 0,2) + \lambda^2) = 0,87$$

$$\chi = \frac{1}{\Phi + \sqrt{\Phi^2 - \lambda^2}} = 0,76$$

$$\text{Toetsing normaalkracht} = \frac{N_{Ed}}{\chi * N_{pl,Rd}} = \frac{900}{0,76 * 4848} = 0,24 \leq 1$$
